The Difference is Clear

A New Choice in
Laser Sinus Surgery

SINU-CLEAR™ LASER SINUS SURGERY

Deviated Septum

Sinu-Clear Laser Sinus Surgery is an advanced treatment for sinus and nasal problems. If you experience sinus headaches, recurrent sinus infections, nasal allergies with or without asthma, facial pressure,

discomfort in the upper teeth, post-nasal drip, mouth breathing, snoring, or you have a deviated septum, you owe it to yourself to discover Sinu-Clear, the newest advancement in the treatment of nose and sinus problems. Nasal and sinus disease affects millions of people and is frequently seen in patients suffering from allergies. Many people have suffered living with these annoying symptoms. If medical management (pharmaceuticals, etc.) has previously failed in treating your symptoms, sinus surgery may be indicated. Most people are unaware of a revolutionary new surgical procedure for treating sinus problems called Sinu-Clear Laser Sinus Surgery.

Sinu-Clear is an advanced treatment option for those suffering from:

- Sinus pain, pressure, and congestion
- Recurrent sinus infections
- Loss of smell
- Headaches
- Severe nasal allergies
- Facial pressure
- Deviated Septum
- Post-nasal drip
- Old fractures of nasal septum from previous injuries
- Nasal Obstruction/Snoring/Sleep Apnea/Mouth Breathing

Nasal Turbinates

- Chronic sinus headaches
- Nasal polyps
- Englarged Nasal Turbinates

This new procedure offers several advantages over conventional sinus surgery. Most importantly, it gives the doctor an enhanced surgical view of the nasal passages and sinus area. Using a laser and a specially designed endoscope to irrigate the nasal cavity with warm salt water, Dr. Paley can remove polyps and diseased tissue, as well as correct deviated septums and old fractures. The procedure uses an endoscope with a camera attached to project the view of the sinus area onto a television screen while warm, salt water is constantly irrigated through the nose. There is virtually no significant bleeding using this technique, which allows for an excellent view of the surgical area, providing for optimum safety and minimal risk of complications. In addition to the increased view of the surgical field, Sinu-Clear offers patients distinct advantages over traditional sinus surgery. Sinu-Clear is performed on an outpatient basis, so a hospital stay is not required. Typically, patients experience less facial pain and swelling. Since there is minimal bleeding and less tissue trauma than with conventional surgery, there is rarely any bruising. Patients return home the same day with no nasal packing, which reduces discomfort and post-operative pain. Additionally, the recuperation time is short, allowing the patient to return to work or their regular routines within a few days.
